**DETAILED ACTION**

1. This is in response to communications filed on March 12, 2001. Claims 1-8 and 10-17 are presented for examination.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-8 and 10-17 are rejected under 35 U.S.C. 102(e) as being anticipated by Lee et al. (USPN 6,615,301; hereinafter Lee).

As per claims 1, 2, 4, 5, 7 and 10-16, Lee discloses the claimed invention including a transceiver interface (interface 100) connectable to a cable (e.g. universal serial bus), the interface including an input for receiving a pair of signals from said cable (e.g. DM and DP signals), and a logic circuit (e.g. transmitter; receiver) connected to the input having a single logic output line, wherein the logic circuit has a first output state where both signals are below a predetermined level (first data state e.g. Single Ended Zero state; see col. 4, lines 36-39 and col. 8, lines 30-46) and a second output state where either or both signals exceed the predetermined

level (e.g. Differential zero state or Differential one state; see col. 4, lines 40-45 and col. 8, lines 30-54).

As per claim 2, Lee discloses a NOR gate (e.g. 62, 623 or 624).

As per claim 6, wherein the device includes an application specific integrated circuit having a single physical connection to said logic output line (col. 10, lines 1-10; fig. 1 e.g. device specific format controller).

As per claims 8 and 17, a mobile radio telephone including the device of claim 6, wherein the application specific integrated circuit also provides mobile telephony functions would be within the teachings of Lee in that Lee discloses a device specific controller and a device 300 connectable to the device specific controller (fig. 1). Lee also discloses that USB peripherals can includes devices such as telephony devices (e.g. col. 2, lines 20-29).
